A**B****C****D****Fig. S4**

Figure 3 is a line graph showing the ratio of GFP to hnRNP L over time (0 to 4 hours) after treatment with cycloheximide (CHX). The y-axis is labeled 'GFP/hnRNP L' and ranges from 0.0 to 1.5. The x-axis is labeled '(h) CHX' and ranges from 0 to 4. The data points are represented by black circles with error bars. The ratio starts at 1.0 at 0 hours, remains stable at approximately 1.0 at 1 hour, and slightly increases to approximately 1.0 at 4 hours. The error bars indicate the standard deviation.

(h) CHX	GFP/hnRNP L
0	1.0
1	~1.0
4	~1.0
